Description:

Carbon cartridge of specially sintered high-density carbon having a high capacity of adsorption of chlorine and other organic impurities in the water. High-density carbon has a much larger filtration surface compared to loose coal, which makes it more efficient. Cartridges on sale are offered in sizes: 10", 10" Big Blue, 20" and 20" Big Blue.

The cartridge is compatible with most 10" in-line housings and filters available on the market. It has a valid attestation of the Polish National Institute of Hygiene (PZH) which allows the product to come into contact with potable water.

Technical information:

- available sizes:
 - 9 7/8" x 2 1/2"
 - 20" x 2 1/2"
 - 9 7/8" x 4 1/2"
 - 20" x 4 1/2"
- work. temp: 2°C - 45°C
- pressure drop: 0,2 - 0,4 bar
- longevity*: 3 - 6 m-cy

* the service life of the cartridges depends on the quality of raw water.

Advantages:

- They remove up to 99% of free chlorine from water
- They remove organic contamination
- They remove up to 85% of chlorine derivative pesticides
- They improve taste and smell of water
- They match the majority of 10" in-line filter housings, under-counter systems, osmotic systems available on the market
- Competitive price
- Quick delivery of orders
- High quality
